

Below mentioned is the other way for users to install Windows in reference to page 3-18 of User's Manual.

Special Features To Use Pointing Devices In The Windows Environment

There are two types of mouse to be chosen :

- (1) Trackball (Microsoft type)
- (2) KeyMouse (PS/2 type)

Please follow the instructions as below when you install Windows 3.1 :

- (1) When Extended Function = Fn (pop up +Immed.) under BIOS setup, KeyMouse (PS/2 type) enables. Choose Microsoft or IBM PS/2 as your mouse type under Windows setup. Trackball won't be active in the process of installation.
- (2) When Extended Function = Ctrl + Alt + Esc (pop up only) under BIOS setup, KeyMouse disables. Choose Microsoft or IBM PS/2 as your mouse type under Windows setup. Trackball is active in the process of installation.

Go back to DOS after installation. Use WMPRESET to make KeyMouse, Trackball, or mouse connected with COM1 (Microsoft type if there is any) active under Windows :

WMPRESET / P : KeyMouse (PS/2 type), to make Fn useful before or after installation

WMPRESET / 2 : Trackball (COM2)

WMPRESET / 1 : Mouse connected (COM1)
